Morand Industries is Proud to Exhibit at One of the Cattle Industries Main Tradeshows

Onoway, Alberta, (November 2010) Optimism is growing in the cattle industry and change is in the air. In fact, many are looking at cattle with renewed value. This positive change will be evident at one of the upcoming premier livestock shows being held in Regina, Saskatchewan from November 20 to November 27, 2010. The Canadian Western Agribition will offer various livestock shows, rodeo events and trade show displays including companies that manufacture quality livestock handling equipment. One such company is Morand Industries of Onoway, Alberta at www.morandindustries.com.

Morand Industries manufacture excellent livestock handling equipment for horses, cattle and bison and is excited to take part in this year's Agribition. They offer squeeze chutes, panels, gates, loading chutes, hay feeders and other livestock equipment for the safe and efficient handling of cattle and bison. Morand is eager to meet with trainers, horse owners and pleasure riders to show the company's exceptional line of stalls, feeders and portable round pens. One of Morand's specialties are ranch gates that can have the farm's name, brand or custom silhouettes added to the top beam as well as exquisite decorative gates that can be customized to the purchaser's specifications. Garden swings, fire pits and deck railings are some extras that are offered as well.

The quality and workmanship that goes into Morand handling systems and products will be worth the investment. Morand stands behind the product, guarantees the construction and provides customer service that will ensure the equipment is working as it should. A strong feature of the cattle squeeze is Morand's patented shoulder holder, which will hold the animal's neck in place to ensure the safe administration of vaccines and medications. Morand's equipment is known for its sturdy construction and is designed for the safe and effective handling of cattle and bison. Morand offers panels in heavy, medium and light duty weight materials and the gates are made with either heavy or medium weight materials. A scale can be set under the squeeze so that when the weight of the animal is known, the correct dose of medication can be administered or the rate of gain of calves can easily be checked. Morand takes pride in being one of the leading manufacturers of this type of equipment and is distributing the product worldwide.

For those looking for a livestock handling system or want to upgrade the present system, look for the Morand Industries display at the Canadian Western Agribition. One of the Morand representatives will be present to speak to all that stop by. For further information, Morand Industries can be reached at 1-780-967-2500, toll free at 1-800-582-4037 or check out Morand's website at www.morandindustries.com. Stop by while visiting the show. Your livestock are worth it.
